Office Action Summary	Application No. 10/656,634	Applicant(s) CHEN, CHIA YU	
	Examiner David B. Thomas	Art Unit 3723	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rowlands (5,862,723) in view of Oriol (1,080,121).

Rowlands ('723) discloses the tool structure as claimed, except for the inclusion of a ball between the latch and the teeth of the driving head. Oriol ('121) teaches that it is known to provide a sliding latch mechanism having an appropriate engaging element for directly engaging the depressions between the teeth of the driving head in order to secure the angular orientation of the driving head relative to the handle, thus eliminating the need for a ball. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the wrench of Rowlands ('723) by eliminating the ball element, as Oriol ('121) teaches that it is known to provide a sliding latch mechanism, without a ball member, such that the latch mechanism provides a means for selective angular orientation of the tool head relative to the handle of the tool, thus eliminating the need for a ball member between the slidable latch and the driving head.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to

Art Unit: 3723

applicant's disclosure. Hu, Hung, and Wilhelm each disclose a sliding latch mechanism for hand tools.
